1 Introduction

11 Background

111 Purpose

Jointly developed by the Postal Service and mailing industry, standardized address information enhances the processing and delivery of mail, reduces undeliverable-as-addressed mail, and provides mutual cost reduction opportunities through improved efficiency. The standards include the uniform methods for matching addresses with the information in AIS products and formats for outputting addresses on mailpieces. This document describes both standardized address formats and content. It outlines the guidelines that govern how address information appears in the Address Information System (AIS) products. *Format* describes how the various elements appear on a mailpiece or in an address record. *Content* describes the characters that constitute the various address elements.

Our objectives in compiling a universal format for maintaining information in the Address Management System (source for the AIS products) and an output format are twofold:

- To facilitate customer use of AIS products, in particular, the ZIP+4 and City State files, thereby maximizing matching potential.
- To optimize the processing capability of automated equipment through improved address quality.

A standardized address is one that is fully spelled out, abbreviated by using the Postal Service standard abbreviations (shown in this publication or as shown in the current Postal Service ZIP+4 file), and uses the proper format for the address style (shown in this publication).

112 Scope

Postal units are adopting these standards, which are required by all internal processing systems and our licensees. This includes the National Change of Address (NCOA) System and Address Change Service (ACS). Mailers are encouraged to incorporate the standards as a means to improve service and deliverability.

113 Additional Benefits

There are additional benefits achieved through improved address quality and a standardized address format, such as increasing the potential deliverability of mail once processed and consistency in address information stored in

customer files and directories. Our emphasis is to clarify addressing techniques and unusual addressing conventions to provide a uniform approach to matching these addresses through customer products and automated equipment.

12 Overview

121 List Maintenance

Postal Addressing Standards provides guidance on the most efficient means to output an address to a mailpiece. It is necessary to begin with list maintenance, or list management, to ensure that the content of the address is accurate and complete. A variety of address information products and services is available to assist in list maintenance. The standards facilitate the use of these products by providing a uniform file format for data entry of address information, as well as for extraction of information for matching purposes.

It is recommended that delivery address information be stored in a minimum of 30 bytes or spaces in your computer system. The optimum recommendation is 64 bytes or spaces to be compatible with the Postal Service National ZIP+4 database.

The Postal Service defines a *complete address* as one that has all the address elements necessary to allow an exact match with the current Postal Service ZIP+4 and City State files to obtain the finest level of ZIP+4 and delivery point codes for the delivery address. A complete address may be required on mail at some automation rates. Refer to the *Mailing Standards of the United States Postal Service*, Domestic Mail Manual (DMM) for more detailed information.

A standardized address is one that is fully spelled out, abbreviated by using the Postal Service standard abbreviations shown in this publication or as shown in the current Postal Service ZIP+4 file.

122 List Correction

Once an address has been matched against the address information files, the address list should be corrected accordingly. It is important to understand that failing to correct your address list with the matched data could result in lower match rates as the USPS address information files are updated. Lower match rates equal higher postage rates. A *match* implies that suffixes, directionals, spellings, and city names as found in the files are correct and necessary for efficient processing and delivery of mail. Other important elements are apartment or suite numbers, Post Office Box addresses, and a complete rural/highway contract route address (with route and box numbers). Addresses that have been *standardized* contain all the necessary address elements as matched against the ZIP+4 and City State files.

Introduction 13

123 Updates

Once files are updated, establish list management procedures to ensure timely updates to maintain accuracy. It is highly recommended that new addresses go through a verification and standardization process to obtain the correct ZIP+4 and delivery point codes prior to adding them to your master address list.

124 Address Output

Once an address list has gone through a standardization process, look at the output of the address as it appears on the mailpiece, insert, or address label. Some postal addressing standards relate to format and readability factors. A standardized address should also be machine readable so it can be processed on high-speed optical character readers (OCRs). Publication 25, Designing Business Letter Mail, contains specifications for properly formatting and printing delivery address information on letter mail. Following these readability guidelines for letter mail that has not been barcoded helps to ensure successful OCR processing. Some important elements affecting machine readability are contained in Appendix A of this document. For complete information, however, we recommend you obtain a copy of Publication 25 from your local Post Office. If your mailpieces will be submitted for automation rates, the requirements in the DMM must be met.

125 **Deliverability**

The final benefit of address standardization is deliverability of a mailpiece. Complete addresses that have matched Postal Service files or directories have a better chance of being promptly and correctly delivered. Printing complete information on a mailpiece and eliminating extraneous information that can confuse delivery personnel or be misread by postal equipment does a lot to get the mail delivered on time. We are continuing to explore ways to improve the processing and delivery of mail in a timely, cost-effective manner. Address standardization is a positive step toward improved address quality and is a cost-effective operation for both postal customers and the Postal Service.

13 Address Information Systems Products and Services

The Postal Service offers a wide range of products and services to help mailers improve and maintain address quality. The products and services listed below can lower production and postage costs by reducing undeliverable-as-addressed mail and by qualifying more mailpieces for postage discounts.

2 Postal Addressing Standards

21 General

211 Standardized Delivery Address Line and Last Line

The Delivery Address Line and the Last Line of addresses output to the mailpiece should be complete, standardized, and validated with the ZIP+4 file and City State file, respectively.

It is recommended that delivery address information be stored in a minimum of 30 bytes or spaces in your computer system. The optimum recommendation is 64 bytes or spaces to be compatible with the Postal Service National ZIP+4 database.

The Postal Service defines a *complete address* as one that has all the address elements necessary to allow an exact match with the current Postal Service ZIP+4 and City State files to obtain the finest level of ZIP+4 and delivery point codes for the delivery address. A complete address may be required on mail at some automation rates. See the DMM for more detailed information.

A *standardized address* is one that is fully spelled out, abbreviated by using the Postal Service standard abbreviations (shown in this publication) or as shown in the current Postal Service ZIP+4 file.

ABC MOVERS 1500 E MAIN AVE STE 201 SPRINGFIELD VA 22162-1010 Recipient Line Delivery Address Line Last Line

212 Format

Format all lines of the address with a uniform left margin. Uppercase letters are preferred on all lines of the address block.

MR JOHN DOE 123 MAGNOLIA ST HEMPSTEAD NY 11550-1234

Address Block

Lowercase letters in various type styles are acceptable provided they meet postal guidelines for OCR readability. See the DMM for OCR readability requirements that must be met for automation rates (other rates may also apply).

213 Secondary Address Unit Designators

Secondary address unit designators, such as *APARTMENT* or *SUITE*, are required to be printed on the mailpiece for address locations containing secondary unit designators. The preferred location is at the end of the Delivery Address Line. The pound sign (#) should not be

102 MAIN ST APT 101

1356 EXECUTIVE DR STE 202

1600 CENTRAL PL BLDG 14

55 SYLVAN BLVD RM 108

used as a secondary unit designator if the correct designation, such as *APT* or *STE*, is known or is shown in the ZIP+4 file.

213.1 Common Designators

The most common unit designators are:

APARTMENT	APT
BUILDING	BLDG
FLOOR	FL
SUITE	STE
UNIT	UNIT
ROOM	RM
DEPARTMENT	DEPT

Note: See Appendix <u>C2</u> for approved designators.

213.2 **Pound Sign (#)**

If the pound sign (#) is used, there must be a space between the pound sign and the secondary number.

425 FLOWER BLVD # 72

213.3 Alternate Location

If all Delivery Address Line information cannot be continued in the Delivery Address Line above the city, state, and ZIP Code, place secondary address information on the line immediately above the Delivery Address Line.

MR M MURRAY APT C 5800 SPRINGFIELD GARDENS CIR SPRINGFIELD VA 22162-1058

214 Attention Line

The Attention Line is placed above the Recipient Line, that is, above the name of the firm to which the mailpiece is directed.

JOHN DOE
ABC COMPANY
1401 MAIN ST
FALLS CHURCH VA 22042-1441

ATTN JOHN DOE
ABC COMPANY
1401 MAIN ST
FALLS CHURCH VA 22042-1441

215 **Dual Addresses**

Eliminate dual addresses on the output mailpiece, if possible, although mailer files may maintain both mailing and physical addresses. However, if dual addresses are used, place the intended delivery address on the line immediately above the city, state, and ZIP+4 Code. Normally, this is the Post Office Box address. The other address must be placed on a separate line above the Delivery Address Line. The ZIP+4 Code used must be the correct code for the delivery address on the line directly above the city, state, and ZIP Code.

1201 BROAD ST E
PO BOX 1001
FALLS CHURCH VA 22062-1001

Mailer File

PO BOX 1001 FALLS CHURCH VA 22041-1001

Maipiece

PO BOX 1001 FALLS CHURCH VA 22041-1001

22 Last Line of the Address

221 City Names

It is strongly recommended that addresses use only approved Last Line (city) names as described in the Postal Service City State file currently in effect.

City names with the City State Mailing Name indicator flag set to YES in the City State file are considered part of a complete and standardized address; city names with the flag set to NO in the City State file should not be used in a complete and standardized address. For a complete and standardized

address, abbreviations for city or state names must be shown in the Postal Service City State file. If you are preparing prebarcoded mail, city names set to NO for mailing name can be used.

222 Punctuation

With the exception of the hyphen in the ZIP+4 Code, punctuation may be omitted in the delivery address block.

MR. WALTER W. WITHERSPOON JR. MDM ENTERPRISES, INC. 1401 S. MAIN ST. PLUMMER'S LANDING, KY 41081-1411

Acceptable

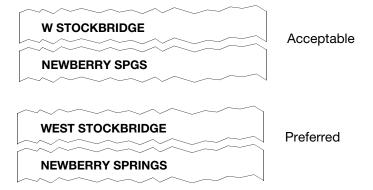

MR WALTER W WITHERSPOON JR MDM ENTERPRISES INC 1401 S MAIN ST PLUMMER'S LANDING KY 41081-1411

Preferred

223 Spelling of City Names

Spell city names in their entirety. When abbreviations must be used due to labeling constraints, use only the approved 13-character abbreviations provided in the City State file.

Note: Normally, the abbreviations follow the logic of using existing abbreviations, such as for suffix or directional words.

224 Format

Format the Last Line with at least one space between the city name, two-character state abbreviation, and ZIP+4 Code.

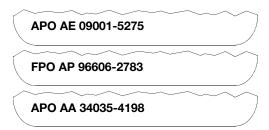

Note: Two spaces are preferred between the state abbreviation and ZIP+4 Code.

225 Military Addresses

225.1 Overseas Locations

Overseas military addresses must contain the APO or FPO designation along with a two-character "state" abbreviation of *AE*, *AP*, or *AA* and the ZIP Code or ZIP+4 Code.

AE is used for armed forces in Europe, the Middle East, Africa, and Canada; AP is for the Pacific; and AA is the Americas excluding Canada.

225.2 **Domestic Locations**

Use only the approved city name as listed in the City State file, along with the two-character state abbreviation and the ZIP Code or ZIP+4 Code.

MINOT AFB ND 58705-1253

226 Preprinted Delivery Point Barcodes

The preprinted Delivery Point barcode must be correct for the delivery address, city, state, and ZIP+4 Code that appear on the mailpiece.

- See the DMM for the barcode requirements that must be met to qualify for automation rates.
- For a list of vendors certified for various barcoding products, please visit our Web site at www.usps.gov or call 800-238-3150.

23 Delivery Address Line

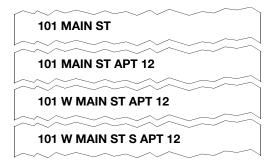

231 Components

The Delivery Address Line, as matched against the ZIP+4 file, must be broken down into its individual components on the mailpiece with one space between address elements.

These components are the primary address number, predirectional, street name, suffix, postdirectional, secondary address indentifier, and secondary address.

The Postal Service uses the parsing logic below to enter address information into the files. When parsing the Delivery Address Line into the individual components, start from the right-most element of the address and work toward the left. Place each element in the appropriate field until all address components are isolated. This process facilitates matching files with AIS products and produces the correct format for output to a mailpiece.

Note: Mailers may use any parsing logic to achieve the same result.

232 Street Name

Information found in the primary name field of the ZIP+4 file is used as the street name. The ZIP+4 file indicates the preferred primary street name to ensure that the correctly designated primary street record is matched during the address standardization processes.

Punctuation is normally limited to periods, slashes, and hyphens:

- Periods: 39.2 RD
- Slashes (fractional addresses): 101 1/2 MAIN ST
- Hyphens (hyphenated addresses): 289-01 MONTGOMERY AVE

Note: Hyphens in the address range are significant and are not removed. Hyphens in the street or city name, however, normally are not significant and may be replaced with a space.

233 Directionals

This is a term the Postal Service uses to refer to the part of the address that gives directional information for delivery (i.e., N, S, E, W, NE, NW, SE, SW).

233.1 Abbreviations

Abbreviate directionals (if they are one of the eight standard directionals listed in AIS files) to the appropriate one- or two-character abbreviation.

233.2 Single Directionals

233.21 Predirectional Field

When parsing the address from right to left, if a directional word is found as the first word in the street name and there is no other directional to the left of it, abbreviate it and locate it in the predirectional field of the ZIP+4 file for standardization purposes.

233.22 Postdirectional Field

When parsing from right to left, if a directional word is located to the right of the street name and suffix, abbreviate it and locate it in the postdirectional field.

233.23 Two Directionals

When two directional words appear consecutively as one or two words, before the street name or following the street name or suffix, then the two words become either the pre- or the postdirectionals. Exceptions are any combinations of *NORTH-SOUTH* or *EAST-WEST* as consecutive words. In these cases the second directional becomes part of the primary name and is spelled out completely in the primary name field.

The other exception is when the local address information unit has determined that one of the directional letters is used as an alphabet indicator and not as a directional.

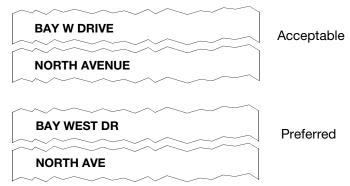

Note: In this example, the two-word directional is the primary street name.

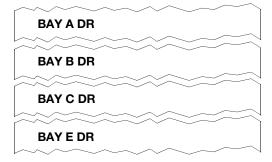

233.3 Directional as Part of Street Name

When parsing from right to left, if the directional word appears between the street name and the suffix, then it appears as part of the primary name spelled out in the ZIP+4 file and is spelled out on the mailpiece.

The exception is when the local AIS unit has determined that the letters (E, N, S, or W) are used as alphabet indicators and not as directionals.

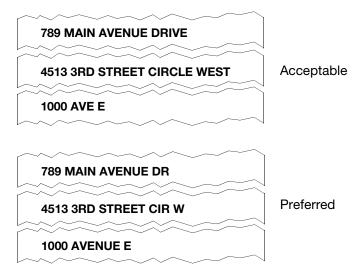

234 Suffixes

234.1 Abbreviations

The suffix of the address should conform with the standard suffix abbreviations listed in the ZIP+4 file (see Appendix C).

234.2 Two Suffixes

If an address has two consecutive words that appear on the suffix table (Appendix C), abbreviate the second of the two words according to the suffix table and place it in the suffix field. The first of the two words is part of the primary name. Spell it out on the mailpiece in its entirety after the street name.

235 Numeric Street Names

Numeric street names, for example, 7TH ST or SEVENTH ST, should be output on the mailpiece exactly as they appear in the ZIP+4 file.

Spell out numeric street names only when there are duplicate street names within a postal delivery area and the only distinguishing factor is that the one you matched is spelled out.

236 Corner Addresses

Corner addresses are replaced by physical street addresses in all AIS files.

237 Highways

The following are recommended standardized examples of county, state, and local highways (see Appendix F for an expanded table).

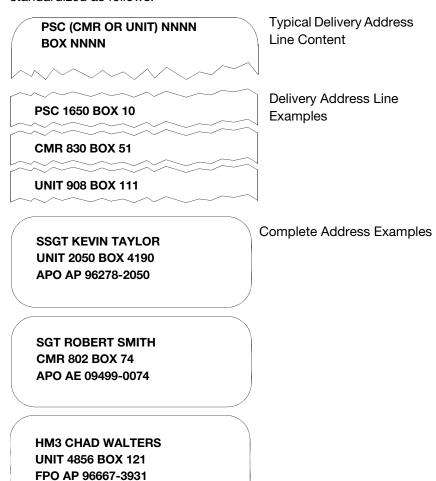

Address	Name
101	COUNTY ROAD 20
11216	COUNTY HIGHWAY 140
1501	HIGHWAY 50
220	INTERSTATE 680
22604	ROAD 123
1650	STATE HIGHWAY 335

Address	Name
7777	STATE ROUTE 39
1155	US HIGHWAY 70
3000	TOWNSHIP ROAD 20

238 Military Addresses

238.1 Overseas Locations

The Delivery Address Line for all APO/FPO military mail must be standardized as follows:

238.2 **Domestic Locations**

All domestic military mail must have a conventional street style address (see part 231).

Department of State Addresses

The Delivery Address Line for DPO Department of State mail must be standardized as follows:

NAME UNIT 9900 BOX 0500 DPO AE 09701-0500

24 Rural Route Addresses

241 Format

Print rural route addresses on mailpieces as: RR N BOX NN. Do not use the words *RURAL*, *NUMBER*, *NO.*, or the *pound sign* (#).

242 Leading Zero

A leading zero before the rural route number is not necessary.

243 Hyphens

Print hyphens as part of the box number only when they are part of the address in the ZIP+4 file.

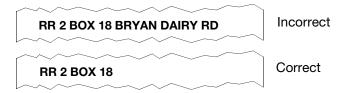

244 Designations RFD and RD

Change the designations *RFD* and *RD* (as a meaning for rural or rural free delivery) to *RR*.

245 Additional Designations

There should be no additional designations, such as town or street names, on the Delivery Address Line of rural route addresses. Because street names used together with route and box numbers can create potential matching difficulty, mailers are encouraged to use only one style of addressing. If secondary name information is used, however, place it above the Delivery Address Line.

246 **ZIP+4**

When applying a ZIP+4 Code to a rural address, an exact match is preferred. If a box number is included in the address, the mailpiece must bear the appropriate ZIP+4 Code representing the range for that box number. When box number information is not available, the Rural Route base record must be used.

25 Highway Contract Route Addresses

251 Format

Print highway contract route addresses on a mailpiece as: HC N BOX NN. Do not use the words *HIGHWAY CONTRACT, ROUTE, NUMBER, NO., STAR ROUTE,* or the *pound sign* (#).

Leading Zero

A leading zero before the highway contract route number is not needed.

253 Hyphens

Print hyphens as part of the box number only when they are part of the address in the ZIP+4 file.

254 Star Route Designations

Change the designation STAR ROUTE, which usually refers to highway contract route, to HC.

255 Additional Designations

There should be no additional designations, such as town or street names, on the Delivery Address Line of highway contract route addresses. Street names used together with route and box numbers can create potential matching difficulty. Mailers are encouraged to use only one style of addressing. If secondary name information is used, however, place it above the Delivery Address Line.

256 **ZIP+4**

When applying a ZIP+4 Code to a highway contract route address, an exact match is preferred. If a box number is included in the address, the mailpiece must bear the appropriate ZIP+4 Code representing the range for that box number. When box number information is not available, the highway contract base record must be used.

26 General Delivery Addresses

261 Format

Use the words *GENERAL DELIVERY*, uppercase preferred, spelled out (no abbreviation), as the Delivery Address Line on the mailpiece. Each record will carry the -9999 add-on code.

MR JOHN ADAMS GENERAL DELIVERY TAMPA FL 33602-9999

262 ZIP Code or ZIP+4

The ZIP Code or ZIP+4 Code must be correctly applied for the general delivery record as found in the ZIP+4 file.

27 United States Postal Service Addresses

271 Format

Mail addressed to the United States Postal Service must contain a complete address.

Addresses may be located in the ZIP+4 file as street, firm, or Post Office Box records (record type S, F, or P, respectively). Most records carry the -9998 add-on code. However, many areas use different add-on codes.

JOHN DOE

POSTMASTER GENERAL UNITED STATES POSTAL SERVICE 475 LENFANT PLZ SW RM 10022 WASHINGTON DC 20260-0010

JOHN DOE

JOHN DOE

MANAGER CUSTOMER SERVICE SUPPORT UNITED STATES POSTAL SERVICE PO BOX 4237 ANYTOWN US 12345-4237

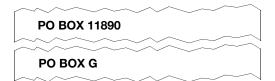

272 ZIP Code or ZIP+4

The ZIP Code or ZIP+4 Code must be correctly applied for the United States Postal Service record as found in the ZIP+4 file.

28 Post Office Box Addresses

281 Format

Post Office Box addresses are output as PO BOX NN on the mailpiece.

282 Leading Zero

Post Office Box numbers that are preceded by significant leading zeroes are identified in the ZIP+4 file by a hyphen (-) preceding the box number. Convert the hyphen into a zero on the output mailpiece.

283 Designations

PO Box addresses often appear with the word CALLER, FIRM CALLER, BIN, LOCKBOX, or DRAWER. Change these to PO BOX as output on a mailpiece.

284 Private Mailbox Addresses

Private companies may uniquely identify, by number, individuals or offices within their company for the purpose of simplifying their internal mail distribution. Print this number, called a *MailStop Code* (MSC), above the Recipient Line or the Attention Line. The words *POST OFFICE BOX* or *PO BOX* and the private mailbox number **cannot** be used on the Delivery Address Line. Only the Postal Service is entitled to provide delivery to a PO Box.

MSC 1587 ABC COMPANY 12 E MAIN AVE STE 209 KRYTON TN 38188-3637

MSC 1587 ABC COMPANY PO BOX 7530 KRYTON TN 38188-7530

The Delivery Address Line is the standardized address of the private company. Private companies offering mailbox rental services to individuals and businesses are considered commercial mail receiving agencies (CMRA). Addresses on mail received at a CMRA must adhere to specific requirements in the use of their private mailbox number (PMB). Mail sent to an addressee at a CMRA must include either the PMB identifier or the #, followed by the appropriate private mailbox number. Use of any other identifier is prohibited. Either a three line or four line address format can be used with a CMRA address and the PMB or # identifier, with the exception noted below. Where the CMRA's physical address requires its own secondary address element, the PMB or # address must follow the specific format rules stated below. It is not permissible to combine the secondary address element of the mailing address for the CMRA and the CMRA customer's private box number. Examples:

JOHN DOE PMB 234 RR 1 BOX 12 HERNDON VA 22071-2716

JOE DOE #234 10 MAIN ST STE 11 HERNDON VA 22071-2716

JOHN DOE 123 MAIN ST #4545 HERNDON VA 22071-2716

JOE DOE PO BOX 159753 PMB 3571 HERNDON VA 22071-2716

Exception:

When the CMRA mailing address contains a secondary address element (e.g., rural route box number, suite, # or other term), the CMRA customer must use PMB when utilizing a three line address format:

Examples:

JOHN DOE 10 MAIN ST STE 11 PMB 234 HERNDON VA 22071-2716

JOE DOE RR 1 BOX 12 PMB 596 HERNDON VA 22071-2716

JOHN DOE 10 MAIN ST STE 11 # 234 HERNDON VA 22071-2716

Unacceptable

JOE DOE RR 1 BOX 12 # 596 HERNDON VA 22071-2716

29 Puerto Rico Addresses

291 Format

Puerto Rico's common addressing consists of various formats, such as:

Apartment Building with Street Address

1234 AVE ASHFORD APT 1A SAN JUAN PR 00907-1021 Number, Street, and Apt. No. City, State, and ZIP+4

Name Condominium Number and Apt. No. City, State, and ZIP+4

Exception

Certain condominiums are not located on a named street or have an assigned number to the building. The name of the condominium is substituted for the street name.

MR JUAN DOE RES LAS MARGARITAS EDIF 1 APT 104 CAGUAS PR 00725-1103 Name Residential Name Building No. and Apt. No. City, State, and ZIP+4

The word *CALLE* is commonly placed before the street name and number. *CALLE* means *STREET* in Spanish, and placing the word *CALLE* prior to other address components is proper use based on Spanish composition. In addition to the word *CALLE*, the word *AVENIDA* or its abbreviation *AVE* may also appear in this position.

292 Urbanization

Urbanization denotes an area, sector, or development within a geographic area. In addition to being a descriptive word, it precedes the name of the area. This *URB* descriptor, commonly used in urban areas of Puerto Rico, is an important part of the addressing format, as it describes the location of a given street.

MR JOHN SMITH URB FAIR OAKS AVE WILSON CHURCHILL 123 RIO PIEDRAS PR 00926-0123 Name Urbanization Street and Number. City, State, and ZIP+4

293 Common Translations

The following is a list of commonly used phrases that may appear in Puerto Rico addresses:

Spanish	English	
Apartado	PO Box	
Buzon	Box	
Buzon Rural	Rural Box	
Ruta Rural	Rural Route	
Ruta Estrella	Highway Contract	
Edificio	Building	

MR JOHN DOE APARTADO 825 SAN JUAN PR 00936-0825

Proper Spanish Format

MR JOHN DOE PO BOX 825 SAN JUAN PR 00936-0825

English Version

The following is a list of Spanish words and their corresponding abbreviations:

Spanish Word	Abbreviation	Spanish Word	Abbreviation
Apartamento	APT	Extencion	EXT
Barriada	BDA	Hospital	HOSP
Building	BLDG	Industrial	IND
Bloque	BL	Jardines	JARD
Barrio	ВО	Mansiones	MANS
Carretera	CARR	Parcelas	PARC
Caserio	CAS	Quebrada	QBDA
Condominio	COND	Reparto	REPTO
Cooperativa	COOP	Residencial	RES
Corporacion	CORP	Sector	SEC
Departamento	DEPT	Terraza	TERR
Edificio	EDIF	Urbanization	URB
Entrega General	GEN DEL	Villa	VIL

294 Spanish Directionals

Directionals are not commonly used in Puerto Rico addresses because other descriptions, such as urbanization, identify geographic areas. When they do appear in addresses, however, they may appear as follows:

Sp	anish	English	
Directional	Abbreviation	Directional	Abbreviation
Norte	N	North	N
Noreste	NE	Northeast	NE
Noroeste	NO	Northwest	NW
Sur	S	South	S
Sureste	SE	Southeast	SE
Suroeste	SO	Southwest	SW
Este	E	East	E
Oeste	0	West	W

Note: The only discrepancies between English and Spanish abbreviations occur in West directionals. In the ZIP+4 file, the English equivalents are used.

295 Delivery Address Line

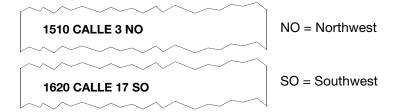

295.1 General

The components of the Delivery Address Line are the primary address number, street name, secondary address identifier, and secondary address range.

125 CALLE MAIN
URB HIGHLAND GARDENS
CONDO LAS AMAPOLIAS APT 103

Primary Address No. and Street Name Secondary Address Identifer Street and Number

Note: In Puerto Rico there are usually no directionals or suffixes. Additionally, most apartment buildings do not have a street address. In this situation, the building name is part of the primary address identifier. If directionals are present in an address, they are part of the street name. Do not translate to directionals.

Note: See Appendix I for additional information regarding Addressing Standards for Puerto Rico. See Appendix J for additional information regarding Addressing Standards for U.S. Virgin Islands.

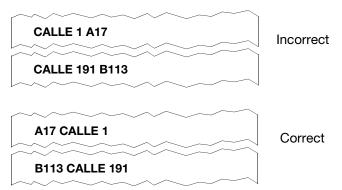

295.2 Street Names

Do not abbreviate street names if at all possible. Consult the abbreviation tables prior to making any abbreviation. For matching purposes, eliminating the word *CALLE* from named streets is recommended. Always print *CALLE*, *AVENIDA*, etc. on the mailpiece.

295.3 Numbered Streets

Numbered streets must always contain the word *CALLE*. This avoids misinterpretation of the delivery information between numbered streets and house numbers.

Note: Do not translate CALLE to the suffix ST. This translation makes the address undeliverable.

295.4 House Numbers

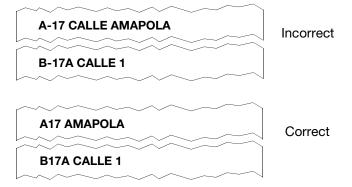

House numbers may have fractional or alphabetic modifiers. To make an address more deliverable because of alphanumeric ranges, place the house number before the street name.

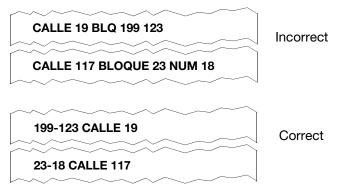

Due to the amount of numbers within a block and a house number in Puerto Rico addresses, many identifiers are used to separate address elements, including *BLOQUE*, *NUM*, *NO*, *CASA*, and *LOTE*. None of the identifiers are part of the address, and they are not in the AIS files.

Certain rules have to be established to eliminate these identifiers from address files. Placing the house number before the street name is recommended.

When placing alphanumeric house numbers prior to the street name, avoid using hyphens.

However, hyphens in the address range may be significant. When addresses contain up to three-digit numeric block numbers, it is necessary to include a hyphen.

This process facilitates matching customer files against AIS since hyphens are present in the AIS files.

295.5 **Urbanization**

Because urbanizations are the most important part of the address, they are abbreviated to *URB* followed by the urbanization name.

Urbanizations are not repeated within five-digit zones and in most cases are served by one single carrier route. Therefore, a list of urbanization names serves for Five-Digit ZIP Code verification.

Note: Certain urbanizations are known as extensiones, mansiones, repartos, villas, parques, and jardines. When these names are present, there is no need to place the abbreviation URB prior to the name of the urbanization.

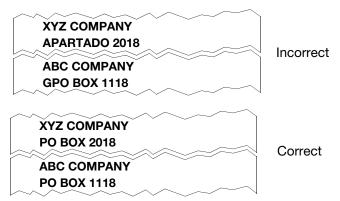

Note: Some areas in Puerto Rico served in urbanizations do not have a street name. The urbanization becomes a street name and is located in the primary identifier of the AIS files.

295.6 Post Office Box

Print Post Office Box addresses as PO BOX on the mailpiece.

PO Box addresses often appear with the words *CALLER*, *CALL BOX*, *GPO BOX*, *PO BOX S-1190*, *APTDO*, *APARTADO*, *BOX*, *BUZON*. These are changed to *PO BOX* as output to a mailpiece.

In certain areas, the station name appears in the line above the city, state, and ZIP Code. We recommend that it is either eliminated from the output address or relocated, placing *PO BOX* above the city and state and placing the station name on the line above. Station names are not present on the ZIP+4 file.

295.7 Rural Route

Rural route addresses are output on a mailpiece as RR N BOX NN. Do not use the words RURAL, RUTA RURAL, BUZON, or BZN.

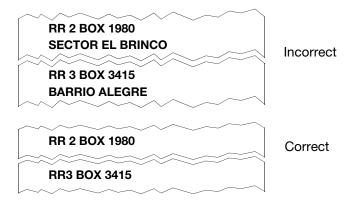

A leading zero before the rural route number is not necessary.

The designations RFD, RD, and RT (meaning rural route) are changed to RR.

There should be no additional designations, such as sector names, on the Delivery Address Line of rural addresses. Sector names used together with route and box numbers can create potential matching difficulty. Mailers are encouraged to use only one style of addressing. Eliminate this information in Puerto Rico addresses.

3 Business Addressing Standards

31 General

Joint Industry and Postal Service Standardization Efforts

This chapter defines standardized formats for business addresses to be used on mailpieces. This standardization effort was originally initiated by the Direct Mail Association (DMA) Business-to-Business Users' Group in late 1987 and included the involvement of other DMA segments groups who provide business-to-business list services. The Postal Service's Address Management Office and National Customer Support Center (NCSC) have worked closely with these groups to pinpoint problem areas and develop recommended solutions. Members of the Graphic Communications Association (GCA) have also provided strong support for the development of these business-to-business addressing standards.

As awareness of business-to-business addressing issues became more widespread, a broader scope of industry participation was facilitated by the establishment of a special ad hoc Business-to-Business Addressing Subcommittee of the Mailers' Technical Advisory Committee in the fall of 1989.

Numerous joint working meetings were held to thoroughly define standardization needs and develop the components of the recommended addressing guidelines outlined in this section. It should be noted that this effort intentionally dovetailed with the earlier joint industry and Postal Service program that established the general addressing standards. Industry and USPS joint work groups will continue to be created to provide the information necessary to achieve the highest level of address quality possible.

312 Unique Addressing Issues

For consumer and residential addresses, a complete and correct address consists of three basic lines of information: Customer or Recipient Line, Delivery Address Line, and Last Line (City State ZIP). Depending on the address type, other address data elements could include apartment or suite numbers, Post Office Box addresses, and a complete rural/highway contract route address (with route and box numbers).

Significantly, in terms of content, business-to-business mailers have much more to worry about with various permutations of firm names, the use of prestige addresses, and auxiliary company and personnel data, e.g., titles,

personal/professional, and department or division. Consequently for the business-to-business mailer, the scope of standardization and list maintenance and correction becomes much more complex.

By establishing preferred format or data element location guidelines, defined character lengths, standard abbreviations, and a progression of compression steps, a process has been created that now enables mailers to uniformly condense business address components to any practical length, depending on the purpose and the need to abbreviate the data. The use of standardized abbreviations and logical compression steps is intended to facilitate the computer-based merge/purge process, Postal Service multi-line optical character readers (MLOCR) and industry address matching services including ZIP+4 and NCOA.

The mailer has full discretion in the use of standard abbreviations and compression guidelines to optimize computer data storage and output to a mailpiece. There is no intent to mandate the use of these abbreviations or guidelines if the mailer prefers the full spelling.

313 Business Address Standardization Factors

Address standardization has the potential to improve many phases of the business-to-business mail process — from merge/purge to delivery. The following are specific problem areas these standards can address.

313.1 Costly Inefficiencies in the Merge/Purge Process

It is hard to identify and eliminate duplicate addresses when address data is presented in varying formats, i.e., when abbreviation and compression tactics are applied randomly or multiple data element combinations are used.

313.2 Costly Poor Address Hygiene

Businesses often prefer to use "prestige" or "vanity" addresses and occasionally use multiple versions of their firm name, depending on their market needs. They also apply differing abbreviation and compression tactics. As a result, match rates against Postal Service address improvement products, i.e., NCOA, Address Change Service (ACS), and ZIP+4, are low.

313.3 Costly Missed Opportunities for Barcoding Discounts

Because of inconsistencies in business address formats, business addresses often do not match against ZIP+4 data used to produce a barcode. Business-to-business mailers find it harder to take full advantage of new automation and barcoding discounts.

313.4 Costly Non-Deliverability

Inconsistent addressing tactics or missing address elements due to varying compression methods often result in undeliverable mail. Delivery of mail within an organization may also be impaired if internal mailstops are not part of the address. In this context *mailstop* refers to a unique routing code used by a company for internal mail delivery. It does not include the traditional information, such as Accounts Payable Branch, or Attn To:. Example: Mailstop ABC 456.

314 Purpose of Standardization

The purpose of standard abbreviations and compression guidelines is to provide a uniform reference when there is a need to condense address data. The standards contain the following components: an address format model indicating preferred address data element locations, a progression of optional line compression steps, and a table of standard abbreviations for the most commonly used business words. These tools are designed to meet the following objectives:

- Improve computer matching of business address data in the merge/ purge process and enhance the application of Postal Service address improvements.
- Facilitate proper address compression for data transfers and differing output presentations, e.g., for Postal Service delivery vs. inside letter personalization or Cheshire labeling vs. ink jet printing.

32 Scope of Standardization

321 Benefits

The Business Address Standards are being adopted by postal units and are required in all internal Postal Service processing systems — including the NCOA System and ACS. Postal Service licensees, direct marketing service bureaus, and business-to-business mailers are encouraged to incorporate these standards as a means to achieve improved merge/purge results, higher list quality, and Postal Service deliverability.

There are additional benefits to be achieved through improved business-to-business address quality and a standardized address format, such as increasing potential deliverability of mail once processed and more consistency in address information stored in customer files and directories. The emphasis has been to clarify business-to-business addressing techniques and provide guidelines and tools that deal with the many unusual addressing conventions in business-to-business list processing. A strong focus has been on providing the Postal Service with a uniform approach to matching these addresses through its customer products and automated equipment.

322 Business-to-Business List Maintenance

Business-to-business addressing standards are tailored to provide guidance on the most efficient means to output a business address onto a mailpiece. It is necessary to begin with list compilation, list maintenance, or list management to ensure that the content of the address is both accurate and complete. A variety of AIS products and services are available to assist in these processes, which have worked well for consumer lists. The business-to-business standards are intended to greatly enhance the use of these products by providing a uniform format for business address information.

323 Business-to-Business List Correction

Prior to this effort of developing specific guidelines and tables for standardization of business-to-business addresses, the application of the Postal Service AIS address improvement products and services was not always an effective means to correct business-to-business addresses- simply because of poor match rates. With the Postal Service incorporating the tables and guidelines that have emerged from this process, the AIS services are much improved for business-to-business applications. In the future, once a business-to-business address has been matched against AIS files, the address list should be corrected accordingly. Business-to-business addresses that have been standardized will contain all the necessary address elements required for Postal Service delivery as well as the most correct firm name and contract information as required for marketing purposes.

324 Business-to-Business List Updates

Once files are updated, it is important to establish list management procedures to ensure timely updates and maintain accuracy. It is highly recommended that new addresses go through a verification and standardization process to obtain the correct ZIP+4 and delivery point codes prior to adding them to your master address list.

325 Business-to-Business Address Output

Once an address has gone through a standardization process, look at the output of the address as it appears on the mailpiece, insert, or address label. A standardized address should also be "machine readable" so that it can be processed on high-speed optical character readers (OCRs). If your mailpiece will be submitted for automation rates (other rates may also apply), the requirements in the DMM must be met.

It is recommended that delivery address information be stored in a minimum of 30 bytes or spaces in your computer system. The most optimum recommendation is 64 bytes or spaces to be compatible with the Postal Service National ZIP+4 database.

The Postal Service defines a *complete address* as one that has all the address elements necessary to allow an exact match with the current Postal Service ZIP+4 and City State files to obtain the finest level of ZIP+4 and delivery point codes for the delivery address. A complete address may be required on mail at some automation rates. See the DMM for more detailed information.

A standardized address is one that is fully spelled out, abbreviated by using the Postal Service standard abbreviations shown in this publication or as shown in the ZIP+4 files.

Business-to-Business Deliverability

The final benefit to be achieved through business-to-business address standardization is deliverability of a mailpiece. Addresses that are complete and have matched the Postal Service files and/or directories have a better chance of being properly delivered. Printing complete information on a mailpiece and eliminating extraneous information that can confuse Postal Service delivery personnel or be misread by Postal Service equipment improves the ability to provide timely delivery. The industry and the Postal Service will continue to work together to explore ways to improve the processing and delivery of mail in a timely, cost-effective manner. Business-to-business address standardization is a very positive step towards improved address quality and a cost-effective operation both for the business-to-business mailer and the Postal Service.

33 Defining Business-to-Business Data Elements

To understand the complexity of business-to-business addressing, a strong effort has been made to identify and define the many individual data elements that can be included in a business-to-business address. Input from the business-to-business field (users and suppliers) — gathered from several industry surveys — aided in the development of the following list. The first nine data elements relate to the marketing intentions of the mailer and do not actually affect Postal Service deliverability of a piece.

The following are data elements that could be included in a business-to-business address:

Company/Contact Information 1. Name Prefix 2. First Name 3. Middle Name or Initial 4. Surname 5. Suffix Title* 6. Professional Title 7. Functional Title 8. Division/Department Name 9. Mailstop Code * Includes maturity (e.g., JR, SR) and professional (e.g., PHD, DDS) suffixes.

Address data elements 10 through 27 are Postal Service standardization issues for purposes of distribution and deliverability:

Distribution and Delivery Address Information

- 10. Street Number
- 11. Predirectional
- 12. Street Name
- 13. Street Suffix
- 14. Postdirectional
- 15. Secondary Unit Indicator
- 16. Secondary Number
- 17. Company Name
- 18. PO Box Number
- 19. City
- 20. State
- 21. ZIP Code
- 22. ZIP+4 Code
- 23. Carrier Route Code
- 24. Operational Endorsement/ACS Participant Code
- 25. Key Line Code
- 26. Intelligent Mail Barcode
- 27. Intelligent Mail Address Block Barcode

The following business address format is recommended when outputting to a mailpiece. Except as noted below, the use of a specific address line or address data element within a line is optional based on marketing intent, data availability, label size, or mailer preference. When a business address data element is not used on a mailpiece, the address data element above is positioned downward into the vacant area, thereby maintaining overall relative address data element placement on the mailpiece.

Address Data Element	Example
Optional Endorsement Line	#BXNHJVF ********C002
Key Line Data	#ABCDEFGHIJKLMNO3# /12345678
Intelligent Mail Address Block Barcode	ապիպորդիկիկիկարարակիրորություն
Mailstop Code	MSC4567ABCD
Attention Line	MS MILDRED DOE
Individual Title	PROFESSIONAL ENGINEER
Functional Title	DESIGN ENGINEERING MANAGER
Group, Department, Division Name	BRAKE CONTROL DIVISION
Business/Firm Name	BIG BUSINESS INCORPORATED
Delivery Address Line	12 E BUSINESS LN STE 209
City, State, ZIP+4 Line	KRYTON TN 38188-0002

It is unlikely that any one business address contains all 11 of the business address data elements detailed above. The example above defines the business address data elements and their relative placement on a mailpiece. Generally, only five lines of address information are suitable for automated processing when not barcoding.

The use of a standardized business address format, standard business word abbreviations, line removal, and business address line compression logic is intended to improve the quality of matches between Postal Service and industry address improvement, hygiene, and matching services. This would include computer-based change of address and merge/purge programs and would facilitate Postal Service and commercial MLOCR recognition.

When **outputting** business address data elements to a mailpiece, the complete address data element, **including the complete and correct spelling of each word**, is preferred. In those instances where certain constraints limit the number of words or characters that can be placed on the mailpiece, the **most preferred** method is to replace fully spelled words with standard address and business word abbreviations. If additional reduction in lines or address data elements is necessary for application on the mailpiece, then apply the guidelines in logical order as presented in subchapter 34.

It is important to note that the application of these logical steps is the option of the mailer and is provided as a standardized approach for use when the mailer has a business need to alter the address format. It is recommended that each logical step be applied only if the additional compression offered by that step is required or desired by the mailer. The application of some logical steps could produce an output that may be unacceptable to the mailer.

34 Line Removal Guidelines

341 Sample Business Address Format

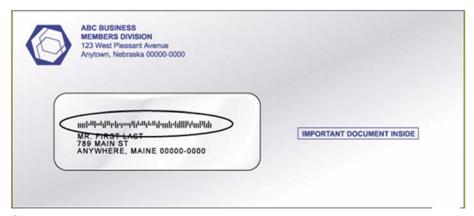

Line		
#	Data Element	Example
*1.	Optional Endorsement Line	#BXNHJVF ********C002
**2.	Key Line Data	#ABCDEFGHIJKLMNO3# /12345678
**3.	Intelligent Mail Address Block Barcode	ապիպորդիկիկիկարավումիրդորակուն
***4.	Mailstop Code	MSC 4567ABCD
***5.	Attention Line	MS MILDRED DOE
***6.	Individual Title	PROFESSIONAL ENGINEER
***7.	Functional Title	DESIGN ENGINEERING MANAGER
***8.	Group, Department, Division Name	BRAKE CONTROL DIVISION
*9.	Business/Firm Name	BIG BUSINESS INCORPORATED
*10.	Delivery Address Line	12 E BUSINESS LN STE 209
*11.	City, State, Zip+4 Line	KRYTON TN 38188-0002

- * These lines directly affect Postal Service distribution.
- ** These lines are required for some Postal Service programs.
- *** These lines are optional for the mailer.

342 Primary Considerations

The preferred location for the Intelligent Mail Address Block Barcode is above the address block or immediately below the optional endorsement and/or key line information, if used. However, it may be placed below the address block if necessary. In either location it must be within 4 inches of the bottom and 1/2 inch from either edge of the mailpiece in order to be read by the barcode sorter. Refer to the DMM for additional criteria and options for placement of the barcode on mailpieces.

Preferred:

Optional:

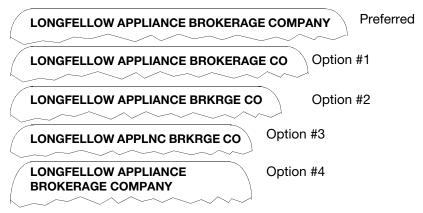

343 Address Line Removal

If the number of business address lines on a mailpiece must be reduced, apply the following steps in the order listed.

343.1 Lines Required for Postal Service Distribution

Lines #9, #10, and #11 contain addressing data elements that are required for distribution and delivery by the Postal Service. Therefore, they must appear as the last three lines of the address block. If it is necessary to compress the number of characters in an address data element, use the recommended abbreviations or suffix tables or the word compression guidelines identified in this publication.

Line #9, Business/Firm Name, should be printed on a single line for maximum MLOCR matching. If necessary it may be wrapped down. The use of standard business word abbreviations is preferred over line wrapping.

Line #9 — Business/Firm Name

When secondary delivery information, e.g., *APARTMENT* or *SUITE*, is part of the address but does not fit on the Delivery Address Line, all secondary components should be placed immediately above the Delivery Address Line.

Line #10 — Delivery Address Line

It is preferred that all City, State, and ZIP Code information be presented on a single line. If that is not possible, the ZIP Code or the ZIP+4 Code should be placed below the City State information. However, when compressing line #11 do not remove the hyphen between the ZIP Code and the ZIP+4 add-on code.

MS MILDRED DOE PROFESSIONAL ENGINEER BIG BUSINESS INCORPORATED 12 E BUSINESS LN STE 209 KRYTON TN 38188-0002

Optional

MS MILDRED DOE PROFESSIONAL ENGINEER BIG BUSINESS INCORPORATED 12 E BUSINESS LN STE 209 KRYTON TN 38188-0002

Preferred

Line #11 — City, State, ZIP+4 Line

343.2 Required Lines for Certain Postal Service Programs

Lines #1 and #2 may be required on the mailpiece when it is submitted under some of the Postal Service presort programs or the ACS program. Therefore, when they are present they must appear in the address block in the order indicated by the Sample Business Address Format. They cannot be wrapped, altered, or compressed. The Optional Endorsement Line must be printed in the same font as the address block.

#BXNHJVF *******C002

Line #1 — Optional Endorsement Line

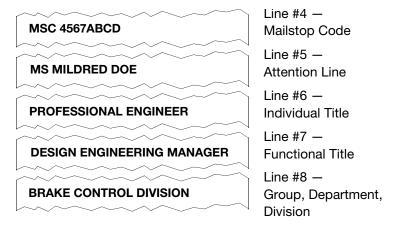

#ABCDEFGHIJKLMNO3# /123456789 BIG BUSINESS INCORPORATED 12 E BUSINESS LN STE 209 KRYTON TN 38188-0002

Line #2 — Key Line Data

343.3 Optional Lines

Lines #4, 5, 6, 7, and 8 are **not** required by the Postal Service for distribution and delivery and are optional for the mailer.

Line #5, Attention, when it contains an individual name, or line #7, Functional Title, may be critical for delivery within the company or firm, but the use of both may not be necessary.

35 Address Data Element Compression Guidelines

The Postal Service and commercial MLOCR equipment can read a maximum of 40 characters per line within a maximum of 8 separate words per line. If either parameter is exceeded, the MLOCR ignores the entire line.

Apply the following steps if it is necessary to reduce the number of words or characters from business address data elements applied to a mailpiece. Use the order listed.

Removal and Deletion Restrictions

Do not remove or delete any characters or symbols from line #1 Optional Endorsement Line, line #2 Key Line Data, or line #3 Intelligent Mail Address Block Barcode.

352 Abbreviations

Use the standard business and address word abbreviations for address data elements whenever necessary. These abbreviations can be found in Appendix <u>G</u>. It is recommended that you only abbreviate the last word. You should not abbreviate words when the name length meets the user's character length requirements.

Preferred

355 Remove Certain Words

Replace or remove certain words as listed below. However, the use of standard business word abbreviations is preferred over removal of words. The following compression technique should be applied only if the standard abbreviations do not meet particular business needs.

- Replace and with space.
- Replace space & space with space.
- Replace number words with numeric symbols: *first* with *1ST*.
- Remove etc., i.e., in care of, and et al.
- Remove words like the, of, by, for, at, also.
- Remove ATTENTION, ATTN:.
- Remove gender words like MS, MRS, MISS, MR, SIR.
- Remove title words like DR, PHD, DDS, RN.

356 Wrapping

When address information does not fit on one line, wrap the additional information on either the line above or below, as shown below. However, the use of standard business word abbreviations is preferred over line wrapping. Only wrap lines if standard abbreviations do not meet your business needs.

Wrapping	Additional Information
No Wrap	Optional Endorsement
No Wrap	2. Key Line Data
No Wrap	Intelligent Mail Address Block Barcode
Wrap Down	Mailstop Code
Wrap Down	5. Attention Line
Wrap Down	6. Individual Title
Wrap Down	7. Functional Title
Wrap Down	8. Group, Department, Division
Wrap Down	9. Business/Firm Name
Wrap Up	10. Delivery Address Line
Wrap Down	11. City, State, ZIP+4 Line

Line #9, Business/Firm Name, should be printed on a single line for maximum MLOCR matching. If necessary, it may be wrapped down.

MS MILDRED DOE PROFESSIONAL ENGINEER BIG BUSINESS INCORPORATED 12 E BUSINESS LN STE 209 KRYTON TN 38188-0002

Preferred

Line #11 — City, State, ZIP+4 Line

357 Line #9 Compression

When compressing line #9, Business/Firm Name, do not alter the first and second words (leftmost), if possible, except when the first word is *THE*, which may be removed.

GENERAL DEVELOPMENT EMPORIUM

THE GENERAL DEVELOPMENT EMPORIUM

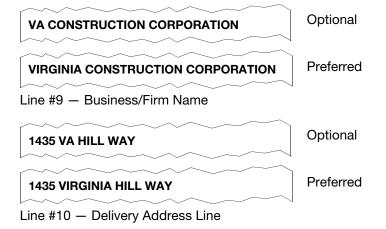

Preferred

Line #9 — Business/Firm Name

358 Standard State Name Abbreviations

When an individual state name that appears anywhere in a business address must be compressed or abbreviated because of space restrictions, use the standard State abbreviation listed in Appendix B.

Note: Use US for United States. Use USA for United States of America.

Repetitive Word Removal

359

Remove repetitive words; however, standard business word abbreviations are preferred over word removal. The compression technique in this step should be applied only if standard abbreviations do not meet your business needs.

3510 Short-Ending Substitution

Substitute short endings on words.

Ending	Substitute
an	= n
er	= r
ial	= I
al	= I
ies	= S
es	= s
ed	= d
ing	= ng
tion	= tn

3511 Last Word Abbreviations

If the last word of an address line is any of those listed below, first replace the word with the standard abbreviation. If additional compression is still required, remove the word or its standard abbreviation.

Note: This step can be applied only to address lines #6, 7, 8, and 9.

Word	Abbreviations
ADMINISTRATION	ADMN
AGENCY	AGCY
BRANCH	BRNCH, BR
CENTER	CTR
COMPANY	СО
CORPORATION	CORP
DIVISION	DIV
ENTERPRISE	ENTRPRS
GOVERNMENT	GOVT
GROUP	GRP
HEADQUARTERS	HDQTRS
INCORPORATED	INC
LABORATORY	LAB
LIMITED	LTD
MANAGEMENT	МСМТ
MANUFACTURER, MANUFACTURING	MFR, MFG
MUNICIPAL	MNCPL
NATIONAL	NATL
PARTNERSHIP	PRTNRSHP
SYSTEM	SYS

3512 Vowel Removal

It is recommended that vowels not be removed if the desired address data element compression can be obtained by first using standard word abbreviations.

From the right side of the address line, beginning with the rightmost word, remove vowels as necessary on a word-by-word basis to achieve desired compression. Leave the last vowel; if the first character of a word is a vowel, do not remove that character. It is also recommended that the vowels not be removed from the leftmost words.

This page intentionally left blank

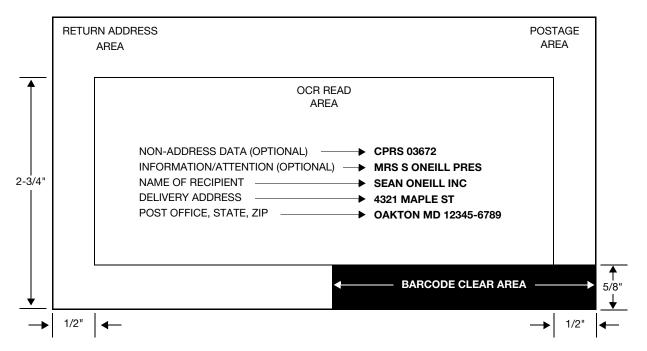

Appendix A

Address Formatting

A1 Readability

An automation readable mailpiece is defined as one that contains an accurate, correctly formatted, complete address or ZIP+4 Intelligent Mail barcode and is readable on an OCR and/or a barcode sorter (BCS). The Intelligent Mail barcode, whether preapplied or printed via an OCR, should reflect the ZIP+4 Code that permits the finest level of sort for each mailpiece.

The recommended address format is shown in the illustration below.

Addresses should be typewritten or machine printed in dark ink on a light background using uppercase letters. Except for the hyphen in the primary or secondary street number (if needed) or the ZIP+4 Code, all punctuation may be omitted. All lines of the address should be formatted with a uniform left margin. When using a foreign address, always place the country name by itself on the last line. (See sample address types in section A2.)

Address characters must not touch and should be equally spaced. All lines of the address should be parallel to the bottom of the envelope. Be sure to include all pertinent information such as the directional code, apartment, floor, and suite number.

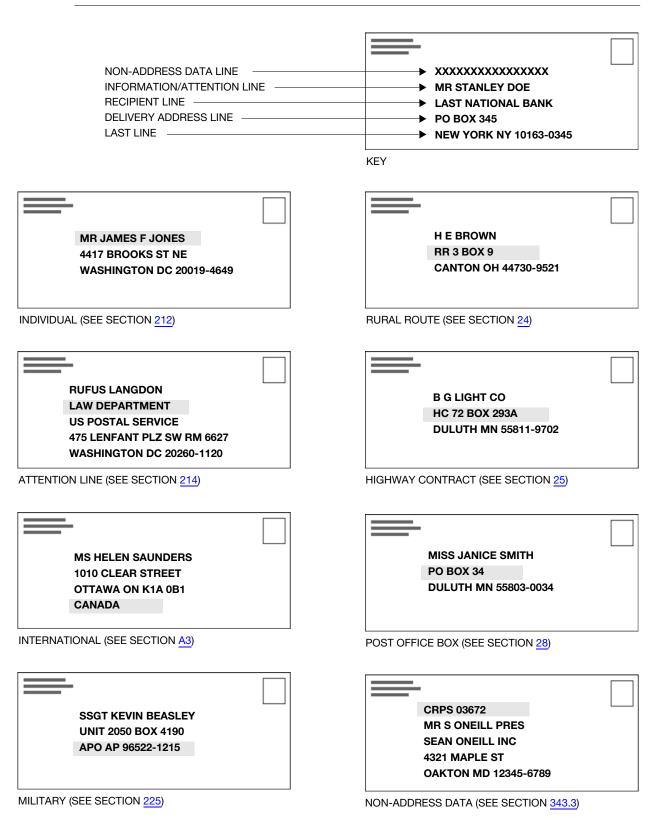

The entire address should be contained in an imaginary rectangle known as the OCR read area (see illustration in section A1) that extends from 5/8 inch to 2 3/4 inch from the bottom of the mailpiece, with 1/2 inch margins on each side.

The barcode clear area, 5/8 inch from the bottom, and $4\ 3/4$ inch from the right edge of the mailpiece (see illustration in section $\underline{A1}$), is the area where an Intelligent Mail barcode is preapplied or printed by an OCR.

Extraneous (nonaddress) printing that appears in the OCR read area should be positioned above the delivery address line and as far away from the address block as possible.

Address Formatting A2

A2 Address Types

A3 International Addresses

A31 General Requirements

The bottom line of the address should show only the COUNTRY name, written in full (no abbreviations) and preferably in capital letters. **Do not place the postal codes (ZIP Codes) of foreign country designations on the last line of the address. Do not underline the COUNTRY name.** An example of a correct foreign address follows:

INGE DIETRIC-FISCHER HARTMANNSTRASSE 7 5300 BONN 1 GERMANY

A32 Canada Only

The following address format is used when the postal address delivery zone is included in the address. Use the standard two-character abbreviation for provinces and territories. On mail to Canada, there must be two spaces between the province abbreviation and the postal code, as shown below between "ON" and "K1A 0B1":

MS HELEN SAUNDERS 1010 CLEAR STREET OTTAWA ON K1A 0B1 CANADA

Canadian Province/ Territory	Postal Service Abbreviation
Alberta	AB
British Columbia	ВС
Manitoba	MB
New Brunswick	NB
Newfoundland and Labrador	NL
Northwest Territories	NT
Nova Scotia	NS
Nunavat Territory	NU
Ontario	ON
Prince Edward Island	PE
Quebec	QC
Saskatchewan	SK
Yukon Territory	YT

Address Formatting A32.1

A32.1 How To Obtain Canadian Postal Code Information

Mailers wishing to order a *Postal Code Directory* for Canada should write to the following address to obtain an order form:

NATIONAL PHILATELIC CENTRE CANADA POST CORPORATION 75 ST NINIAN ST SUITE 100 ANTIGONISH NS B2G 2R8 CANADA

Telephone: 800-565-4362

Major mailers requiring postal code information on CD-ROM or information regarding Canadian mailing standards should write to the following address:

ADDRESS MANAGEMENT CANADA POST CORPORATION 2701 RIVERSIDE DR SUITE NO813 OTTAWA ON K1A 0B1 CANADA

Telephone: 800-363-3459

Appendix B

Two-Letter State and Possession Abbreviations

Use the abbreviations below when addressing mail. Using the two-letter state abbreviations makes it possible to enter the city, state, and Five-Digit ZIP Code (or ZIP+4 Code) on the last line of the address within 28 positions when necessary: 13 positions for city, 1 space between the city and state abbreviation, 2 positions for the state, 2 spaces (preferred) between the state and ZIP Code, and 10 positions for the ZIP+4 Code.

Appendix D

Unusual Addressing Situations

There are a number of addressing situations that can create matching and standardization difficulties. The standards contained in this document do not account for every type of addressing situation that may occur; however, these standards are comprehensive and reflect a majority of address styles.

There are some addressing situations of which a mailer should be aware. These include:

D1 Hyphenated Address Ranges

These are prevalent in New York City (for example, 112-10 BRONX RD), Hawaii, and areas in southern California. The hyphen in the primary range should not be removed if matched to the ZIP+4 file.

D2 Grid Style Addresses

These contain significant punctuation, such as periods (for example, 39.2 RD, 39.4 RD). There are also grid style addresses in Salt Lake City that include double directionals (for example, in 842 E 1700 S: E is a predirectional, S is a postdirectional, and 1700 is located in the primary name field).

D3 Alphanumeric Combinations of Address Ranges

For example, *N6W23001 BLUEMOUND RD*, as found in Wisconsin and Northern Illinois.

D4 Fractional Addresses

These are represented as three or four character positions (for example, 123 1/2 MAIN ST). 123 1/2 takes seven character positions in the range field.

D5 Spanish and Other Foreign Words

These are found in Puerto Rico, for example, and are difficult to match. For the purpose of providing as much assistance as possible to standardize Puerto Rico addresses, a complete description of the file format for matching these addresses begins in part 293. Additional information on Spanish words used in primary street names may be found in Appendix H.

For the other address styles mentioned, mailers should be aware that the ZIP+4 file contains these addressing conventions. In most cases, however, unnecessary punctuation and special characters have been removed and are not recommended on a mailpiece.

Alphanumeric address ranges create a challenge for accurate matching. Appendix $\underline{\mathsf{E}}$ provides guidelines for locating and matching alphanumeric ranges (both primary and secondary).

Note: See Appendix <u>I</u> for additional information regarding Addressing Standards for Puerto Rico. See Appendix <u>J</u> for additional information regarding Addressing Standards for U.S. Virgin Islands.

Appendix E

Address Standardization — Alphanumeric/ Fractional Coding

E1 Format

E11 Determining Address Ranges

Alphanumeric ranges present a challenge to the address matching process, whether it is being done on the MLOCR, by a vendor's software, or manually. The difficulty in alphanumeric matching is in trying to determine what addresses fall in the range. The following coding rules are being provided to eliminate the inconsistency in the way some of our alphanumeric ranges are coded. The rules that follow apply to both the primary and secondary ranges in street records, rural route box numbers, and highway contract box numbers.

These rules have been developed through meetings, both internal and with some of the major address matching software vendors. We can more accurately match alphanumerics against the ZIP+4 file if they are coded consistently with these rules.

E12 Alphanumeric Ranges

E12.1 Format

In whole numeric ranges all single alphanumeric combinations make a match as long as the input record is higher than the numeric low and lower than the numeric high and the ZIP+4 add-on code is the same.

Example:

100-198(e) MAIN ST	12345-1234
98A	invalid (outside of range)
198A	invalid (outside of range)
102B	valid
158Δ	valid

158AA invalid (multiple alphas must be coded)

If 104A MAIN ST has a separate add-on code, it must be coded and the range 100-198 must be broken (as 100-104 and 106-198).

The low range and the high range must contain the same format of the alphanumeric combination. Numeric numbers do not make a match to alphanumeric ranges.

10A-20A valid 115C-115F valid AB90-AB120 valid 15AB-15AC valid 12-12 invalid (numerics are not included in alphanumeric ranges) 10-20A invalid (numeric to alphanumeric) 10A-20 invalid (alphanumeric to numeric) A-AB invalid (single to double alpha)

It is acceptable to go from a one-digit numeric to a two-digit numeric (or two-digit numeric to a three-digit numeric, etc.) in a single alphanumeric range record, but it is invalid to go from a single alpha to a double alpha (or double alpha to a triple alpha, etc.).

90A	101A	valid
AB1	AB10	valid
A101	AB101	invalid (single to double alpha)

E12.2 Middle Range

The middle of a range contains all of the logical alphanumeric combinations as determined by the value of the low and high ranges and the odd/even indicator.

2A–10A cannot contain 1A, 4B, or 10B, but does contain 3A, 6A, and 7A. BC15–BF15 cannot contain BA15, BM15, or BC16, but does contain BD15.

Note: A pure numeric range (1–99) contains all possible combinations with a single trailing alpha (e.g., 1A, 3X, 25Z, 43A).

E12.3 Alpha and Numeric Range Format

When rule one is followed, either the numeric value can be ranged or the alpha value can be ranged but not both; **numerics are not included in alphanumeric ranges.**

1A-4A	valid (contains 2A, 3A, but not 2B, 1, 2, 3, or 4)
1A-1F	valid (contains 1B, 1E, but not 1G)
B3-N3	valid (contains D3, L3, but not A3)
C4-C16	valid (contains C5, C10, but not D5, 10, or C17)
1A-4F	invalid (contains both values ranged)

E12.4 Multiple Alphas in a Single Field

In a range with multiple alphas in a single field, only the last position of the alpha is ranged.

10AB-10AD valid 101AAA-101AAE valid BC100-BF100 valid

101AAA-101ABA invalid (middle alpha changed)

AB100-AD199 invalid (complex alpha and numeric ranged)

If a range consists of multiple alphas (with or without numerics), and a position other than the last alpha seems to change (as in the invalid example above), multiple records are coded for that range, as in the following:

A centralized delivery receptacle containing these alphas:

AAA	ABA	ACA	ADA
AAB	ABB	ACB	ADB
AAC	ABC	ACC	ADC
AAD	ABD	ACD	ADD

The ZIP+4 file will be reflected as shown below for a single ZIP+4 add-on code:

AAA	AAD	valid (first record)
ABA	ABD	valid (second record)
ACA	ACD	valid (third record)
ADA	ADD	valid (fourth record)
AAA	ADD	invalid (middle alpha cannot change)

The following example describes a condition that you may encounter. In this apartment complex there are three Arrow locks, one for building A, one for building B, and one for building C.

A1A	A2A	АЗА	A1B	A2B	A3B	1st Arrow lock
B1A	B2A	вза	B1B	B2B	B3B	2nd Arrow lock
C1A	C2A	C3A	C1B	C2B	C3B	3rd Arrow lock

Because the last two characters change in each address, apply the preceding rules to range only the last alpha position as shown below. The ZIP+4 file shows multiple records for each building. Each Arrow lock has its own ZIP+4 add-on code.

A1A	A1B	add-on for 1st Arrow lock
A2A	A2B	add-on for 1st Arrow lock
A3A	A3B	add-on for 1st Arrow lock
B1A	B1B	add-on for 2nd Arrow lock
B2A	B2B	add-on for 2nd Arrow lock
ВЗА	B3B	add-on for 2nd Arrow lock
C1A	C1B	add-on for 3rd Arrow lock
C2A	C2B	add-on for 3rd Arrow lock
C3A	C3B	add-on for 3rd Arrow lock

E12.5 Grid Addresses

The following describes how to code two styles of grid addresses:

N18W22604 or 6W220

In both of these examples, only the right-most numeric portion should be ranged.

N18W22604 N18W22698 valid 6W220 6W298 valid

N23W2400 N26W2598 invalid (ranging both numerics) 4N3000 7N3098 invalid (ranging both numerics)

E12.6 Odd/Even/Both Indicator

The following describes the way to set the odd/even/both (O/E/B) indicator in alphanumeric ranges. After following the preceding rules, the proper setting of the O/E/B indicator is important. The O/E/B indicator must be set as *BOTH* in every instance where the alpha is the ranged element. Even and odd indicators may be set only if the numeric portion of the alphanumeric range is the single element ranged. Obviously, any range containing both even and odd numeric elements must be coded as *BOTH*.

10A–20A acceptable (numeric range, BOTH or EVEN)

115C–115F (alpha range, must be BOTH)

AB1-AB10 (numeric range, 1–10, must be BOTH)
AB2-AB10 acceptable (numeric range, BOTH or EVEN)

A1A-A1B (alpha range, must be BOTH)

6W220-6W298 acceptable (numeric range, BOTH or EVEN)

E13 Fractional Addresses

All possible fractions are contained within the limits of numeric ranges. Individual fractional addresses should not be coded unless they fall outside of the numeric range or have a different ZIP+4 Code. If the range is 1–99(O), 13 1/2, 49 1/3, 57 3/4, and 75 1/16 fall within the limits of the range. 99 1/2 does not, nor does 1/2 or any other purely fractional address.

If a fractional address is the beginning or ending number on the blockface, the ZIP+4 file will show a numeric range record and one or more fractional address records that share the same ZIP+4 Code. The address should be ranged to itself (99 1/2–99 1/2 B). If your fractional address needs to carry a different ZIP+4 Code, it must be pulled out of the numeric range as a separate record.

Example:

101–199(O) MAIN ST 1245-1235 101 1/2 valid

199 1/2 invalid (outside of range)1/2 Invalid (outside of range)

Appendix F

Address Standardization — County, State, Local Highways

The following are examples of county, state, and local highway primary names and the recommended standardized format. These are not the only possible examples.

Examples in Use	Standard
COUNTY HIGHWAY 140	COUNTY HIGHWAY 140
COUNTY HWY 60E	COUNTY HIGHWAY 60E
CNTY HWY 20	COUNTY HIGHWAY 20
COUNTY RD 441	COUNTY ROAD 441
COUNTY ROAD 110	COUNTY ROAD 110
CR 1185	COUNTY ROAD 1185
CNTY RD 33	COUNTY ROAD 33
CA COUNTY RD 150	CA COUNTY ROAD 150
CALIFORNIA COUNTY ROAD 555 (excessive characters)	CA COUNTY ROAD 555
EXPRESSWAY 55	EXPRESSWAY 55
FARM to MARKET 1200	FM 1200
FM 187	FM 187
HWY FM 1320	FM 1320
HIGHWAY 101	HIGHWAY 101
HIWAY 1080A	HIGHWAY 1080A
HWY 64	HIGHWAY 64
HWY 11 BYPASS	HIGHWAY 11 BYP
HWY 66 FRONTAGE ROAD	HIGHWAY 66 FRONTAGE RD
HIGHWAY 3 BYP ROAD	HIGHWAY 3 BYPASS RD
l10	INTERSTATE 10
INTERSTATE 40	INTERSTATE 40
IH280	INTERSTATE 280
INTERSTATE HWY 680	INTERSTATE 680
I 55 BYPASS	INTERSTATE 55 BYP
I 26 BYP ROAD	INTERSTATE 26 BYPASS RD
I 44 FRONTAGE ROAD	INTERSTATE 44 FRONTAGE RD
LOOP 410	LOOP 410
RD 5A	ROAD 5A
ROAD 22	ROAD 22
RT 88	ROUTE 88

Examples in Use	Standard
RTE 95	ROUTE 95
ROUTE 1150EE	ROUTE 1150EE
RANCH RD 620	RANCH ROAD 620
ST HIGHWAY 303	STATE HIGHWAY 303
STATE HWY 60	STATE HIGHWAY 60
SR 220	STATE ROAD 220
ST RD 86	STATE ROAD 86
STATE ROAD 55	STATE ROAD 55
SR MM	STATE ROUTE MM
ST RT 175	STATE ROUTE 175
STATE RTE 260	STATE ROUTE 260
TOWNSHIP RD 20	TOWNSHIP ROAD 20
TSR 45	TOWNSHIP ROAD 45
US 41 SW	US HIGHWAY 41 SW
US HWY 44	US HIGHWAY 44
US HIGHWAY 70	US HIGHWAY 70
KENTUCKY 440	KY HIGHWAY 440
KENTUCKY HIGHWAY 189	KY HIGHWAY 189
KY 1207	KY HIGHWAY 1207
KY HWY 75	KY HIGHWAY 75
KY ST HWY 1	KY STATE HIGHWAY 1
KY STATE HIGHWAY 24	KY STATE HIGHWAY 24
KENTUCKY STATE HIGHWAY 625 (excessive characters)	KY STATE HIGHWAY 625

Note: When the name of a state is used as a portion of the Primary Street Name, the standard two-letter abbreviation is recommended as depicted in the previous examples. However, when the state name is the complete Primary Street Name, such as OKLAHOMA AVE, then the state name should be spelled out completely.

Standard Abbreviations for Spanish-Language Addresses

In many areas of the country, street names are influenced by Hispanic culture. In these areas, Spanish prefix words such as *AVENIDA*, *CALLE*, and *CAMINO* are frequently used as the first word of the street name and often combined with prepositional phrases such as *de*, *la*, *de las*, and the noun they are describing. For example, *AVENIDA DE LA ESTRELLA* and *CAMINO DE LAS VILLAS* are Hispanic words called *prefixes* because they normally occur at the beginning of the street name, while the English translation would be placed as a suffix in an address.

When the number of characters available for output on a mailpiece is restricted by the size of the label or other considerations, abbreviations and other data compression methods are frequently employed. While it is the preference of the Postal Service that all words in a mailing address appear fully spelled out, this section is intended to provide a set of standard abbreviations to be used when mailers encounter the following Spanish prefixes in the delivery address line and there is a need to compress the output to the mailpiece.

Spanish Prefix	Standardization	English Translation
AVENIDA	AVE	Avenue
CALLE	CLL	Street
CAMINITO	СМТ	Little Road
CAMINO	CAM	Road
CERRADA	CER	Closed
CIRCULO	CIR	Circle
ENTRADA	ENT	Entrance
PASEO	PSO	Path
PLACITA	PLA	Little Plaza
RANCHO	RCH	Ranch
VEREDA	VER	Small Path
VISTA	VIS	View

Note: The English translation is provided for information only. Do not replace the Spanish words with the English translation!

Appendix I

Postal Addressing Standards for Puerto Rico

11 General

111 Complete Address

The Postal Service defines a *complete address* as one that has all the address elements necessary to allow an exact match with the current Postal Service ZIP+4 and City State files to obtain the finest level of ZIP+4 and delivery point codes for the delivery address. A complete address may be required on mail at some automation rates. See the DMM for more detailed information.

112 Standardized Address

A standardized address is one that is fully spelled out, abbreviated by using the Postal Service standard abbreviations (shown in Publication 28 or as shown in the current Postal Service ZIP+4 file), and uses the proper format for the address style.

12 Address Formats

121 Residential Addresses

Puerto Rico's common addressing style consists of various formats.

121.1 Four-line Address

Example:

MRS MARÍA SUÁREZ URB LAS GLADIOLAS 150 CALLE A SAN JUAN PR 00926-3232 Name Urbanization Name House Number and Street Name City, State, and ZIP+4 Code

121.2 Three-line Address

Example:

MR JUAN SANTIAGO 1234 CALLE AURORA MAYAGÜEZ PR 00680-1233 Name
House Number and Street Name
City, State, and ZIP+4 Code

121.3 Exceptions

Some areas in Puerto Rico do not have street names or repetitive house numbers. The urbanization name substitutes as the street name and becomes the primary identifier in the AMS files.

Example:

MR PEDRO RÍOS 1234 URB LOS OLMOS PONCE PR 00731-1235 Name House Number and Urbanization Name City, State, and ZIP+4 Code

There are also public housing projects (residenciales) without street names or repetitive apartment numbers. In these cases the apartment number is the primary number and the name of the public housing project becomes the street name.

Example:

MR PEDRO O VALENTÍN 23 RES LLORENS TORRES SAN JUAN PR 00924-1234 Name Apartment Number and Residential Name City, State, and ZIP+4 Code

Apartment Buildings and Condominiums

There are two basic address formats for apartment buildings and condominiums.

122.1 Buildings With a Physical (Street) Address

Example:

MR EMILIO ARROYO COND ASHFORD PALACE 1234 AVE ASHFORD APT 1A SAN JUAN PR 00907-1234 Name Building Name Street Number, Street Name, Apartment Number City, State, and ZIP+4 Code

22.2 Buildings Without a Physical Address

Certain condominiums are located on an unnamed street and may not have an assigned number. The name of the condominium substitutes as the street name and the number 1 is used when no building number exists.

Example:

MRS NORA RÍOS 1 COND MIRAFLOR APT 104 SAN JUAN PR 00907-1335 Name Bldg Number, Bldg Name, and Apt Number City, State, and ZIP+4 Code

When there are multiple buildings (or towers) with the same name, the building number becomes the primary number.

Examples:

Incorrect Form	Correct Form
COND VERDE APT 1120	1 COND VERDE APT 1120
VISTA SUITES III APT 104	3 VISTA SUITES APT 104

13 Descriptive Spanish Words

W	Alala a a data a

Urbanización	URB

14 Directionals

Directionals are not commonly used in Puerto Rican addresses because other descriptions, such as the urbanization name identify geographic areas. In the ZIP+4 file, the English equivalents are used.

Note: Although the Spanish word for West is Oeste, the abbreviation W is used.

Abbreviation	Spanish	English
N	NORTE	NORTH
NE	NORESTE	NORTHEAST
NW	NOROESTE	NORTHWEST
S	SUR	SOUTH
SE	SURESTE	SOUTHEAST
SW	SUROESTE	SOUTHWEST

15 Delivery Address Line

151 Components

The components of the delivery address are: the primary address number and street name, URB, secondary address identifier, and secondary address. Example:

125 CALLE MAIN URB HIGHLAND GDNS 1 COND AMAPOLA APT 103 Primary Address and Street Name Urbanization Name (secondary address identifier) Secondary Address and Secondary Address

151.1 Street Names and Prefixes

Consult the abbreviation tables in Publication 28, prior to abbreviating any street name.

Spanish street names generally have the suffix element preceding the root street name, making it a prefix. The AMS database has no prefix element, so Spanish prefixes are stored in the street name field along with the actual street name.

Examples:

CALLE AVENIDA, PASEO, PLAZA, PASAJE, CARR, PARQUE, VEREDA, VISTA, VIA, CALLEJON, PATIO, BLVD, CAMINO, CALETA, MARGINAL

585 AVE FD ROOSEVELT 105 CAMINO AMAZONA 1025 PARQUE DEL REY 1212 VIA ANGÉLICA

Note: Do not substitute the prefix CALLE with the suffix ST. Such substitutions render the address undeliverable.

151.2 Numbered Streets

Numbered streets must always contain a street prefix. This avoids misinterpretation of the delivery information between the numbered street and the house numbers.

Examples:

A17 CALLE 1 13 CALLE 191

151.3 House Numbers

Always place the house number before the street prefix. When the house number is alphanumeric, do not use a hyphen to separate the letter from the number.

Examples:

Incorrect Form	Correct Form
CALLE 125 C-19	C19 CALLE 125
A-17 CALLE AMAPOLA	A17 CALLE AMAPOLA
B-40 CALLE 1	B40 CALLE 1

Hyphens in the address range are sometimes necessary. When addresses contain block numbers and house numbers, use a hyphen to separate the block number from the house number. Some identifiers commonly used to separate these elements such as *Bloque*, *Número*, *Casa*, *Lote*, and # must not be included.

Examples:

Incorrect Form	Correct Form
CALLE 19 BLQ 199 Casa 31	199-31 CALLE 19
CALLE 117 Bloque 23 Núm.18	23-18 CALLE 117

This process facilitates matching customer files against AMS files.

151.4 Urbanizations

An urbanization denotes an area, sector, or residential development within a geographic area. Commonly used in Puerto Rican urban areas, it is an important part of the addressing format, as it describes the location of a specific street.

In Puerto Rico, identical street names and address number ranges can be found within the same ZIP Code. In these cases, the urbanization name is the only element that correctly identifies the location of a particular address. Generally, the abbreviation *URB* is placed before the urbanization name.

Examples:

MR OSIRIS GONZÁLEZ URB ROYAL OAKS 123 CALLE 1 BAYAMÓN PR 00961-0123 MR PEDRO RIVERA URB HERMOSILLO 123 CALLE 1 BAYAMÓN PR 00961-1212

Generally, urbanizations names are not repeated within five-digit ZIP Codes and, in most cases, are served by the same carrier route. Therefore, a list of urbanization names serves as five-digit ZIP Code verification.

Exceptions

The following urbanization names stand alone and *do not require* the use of the abbreviation *URB*.

Urbanization	Abbreviation
Altura(s)	ALT(S)
Barriada	BDA
Barrio	ВО
Bosque	BOSQUE
Brisa(s)	BRISA(S)
Ciudad	CIUDAD
Colina(s)	COLINA(S)
Chalets	CHALETS
Comunidad	COMUNIDAD
Estancias	EST
Extensión	EXT
Hacienda	HACIENDA
Jardines	JARD
Industrial	IND
Loma(s)	LOMA(S)
Mansiones	MANS
Parque	PARQ
Parcela(s)	PARCELA(S)
Paseo	PASEO
Pradera	PRADERA
Portal	PORTAL
Portales	PORTALES
Quintas	QUINTAS
Residencial	RES
Reparto	REPTO
Riberas	RIBERAS
Sector	SECT
Terraza	TERR
Valle	VALLE
Villa(s)	VILLA(S)
Vista(s)	VISTA(S)

Example:

Incorrect Form	Correct Form
URB EXT VISTA BELLA	EXT VISTA BELLA
URB ALTS DE CANÁ	ALTS DE CANÁ

151.5 Post Office Box

Always use *PO BOX* to identify Post Office Boxes. Do not use Spanish words. Example:

PO BOX 1195

PO BOX 193565

PO Box addresses are often written in various forms, e.g., *Caller*, *Call Box*, *GPO Box*, *APARTADO*. The only authorized format is *PO BOX*. All other forms should be changed to "PO Box" on the mailpiece.

The postal station name is not needed on the mailpiece because the ZIP Code identifies the station. However, when the station name appears on the mailpiece, it should be placed above the delivery line.

Example:

OLD SAN JUAN STA PO BOX 9021190 SAN JUAN PR 00902-1190

151.6 Rural Routes

The proper format for rural route addresses is RR_____Box____. Do not use the words Rural, Ruta Rural, RFD, Buzón, or BZN. A leading zero before the route number is not necessary.

Examples:

Incorrect Form	Correct Form
Ruta Rural 3 Buzón 12000	RR 3 BOX 12000
RR02 Box 9800	RR 2 BOX 9800
RFD 1 Bzn 17-A	RR 1 BOX 17A

There should be no additional designations such as sector names on the delivery address line of rural addresses. Names of sectors used together with route and box numbers can create potential matching difficulty. Mailers are required to use only one address style. Eliminate unnecessary information.

Examples:

Incorrect Form	Correct Form
RR 2 BOX 1980 SECTOR EL BRINCO	RR 2 BOX 1980
RR 3 BOX 3415 BARRIO VISTA ALEGRE	RR 3 BOX 3415

151.7 Highway Contract Routes

The proper format for highway contract route addresses is $HC__BOX__$. It is basically the same format utilized for rural routes. Likewise, a leading zero before the route number is not necessary.

Examples:

Incorrect Form	Correct Form
Ruta Estrella 1 Buzón 18	HC 1 BOX 18
HC 03 Bzn 1050	HC 1 BOX 1050

As with rural route addresses, there should not be any additional designations, such as names of sectors in the delivery address line of HC addresses.

Use only one style of addressing. Eliminate unnecessary information.

151.8 Last Line

An essential element in a complete address is the last line which must include the city, state and ZIP Code. Certain areas of the San Juan metropolitan area are identified by residents with names such as *Condado*, *Barrio Obrero*, and *Rio Piedras*. These are not valid last line entries. SAN JUAN is the only valid city name for addresses within San Juan.

Appendix J

Postal Addressing Standards for the U.S. Virgin Islands

J1 Address Formats

Virgin Island addresses follow the rules outlined in Publication 28, *Postal Addressing Standards*. The Virgin Islands do not use urbanizations or Spanish words. Single primary street addresses do not have lot numbers as part of the mailing addresses. These are physical identifiers.

Examples:

Street Name
Adel Gade
Annas Fancy
Annas Retreat
Bjerge Gade
Castle Coakley
Estate Bovoni
Holgers Hope
King Cross St
Long Pt
Lower Hull
Lower Lerkenlund
Lytton Fancy
Mahogany Welcome
Mount Pleasant
New St
Oldenney
Paradise MIs

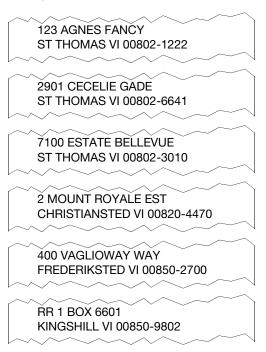

The valid last line for Charlotte Amalie is ST THOMAS. ST JOHN is the valid last line for Cruz Bay.

St Croix has three main cities that are used as valid last lines: CHRISTIANSTED, FREDERIKSTED, and KINGSHILL.

The correct abbreviation for the Virgin Islands is VI. Do not use USVI, VIS, VI USA, or USA VI.

J2 Physical Addresses

Examples:

J3 Post Office Box Addresses

Examples:
