Key Elements of Simplification

- To identify a set of **Core Components** broadly applicable to, and *re-usable* in subsequent specification of, **Use Cases**
 - Core Components are **Requirements, Events, Actions, Actors, Roles and Data Objects and Elements**, that we:
 - Find in common across Use Cases, Scenarios and Events;
 - Might re-use in a new Use Case Scenario.
- To establish/maintain a **Core Component Registry**
- To allow each Use Case Initiative to
 - Select (re-use) Core Components applicable to their needs
 - Create anew: identify new Core Component candidates
- To identify **Implementable Data and Software Constructs** fulfilling Core Component requirements

Key Objectives

- To lay the **foundation** for a consistent infrastructure and build-out
- To lead to **uniformity** in requirement specification, standards and implementation guidance, software development, testing and certification, implementation
- To ensure **requirements traceability**, at each progression step, and end-to-end (use case to implementation)
- [NIST] To **apply cross-industry**: beyond S&I Framework, beyond the domain of health and healthcare
 - A generic approach

Considering...

- Which Components of a Use Case are:
 - Potentially **computable**?
 - As implementable software and/or data objects?
 - Uniquely **identifiable**? **Catalogue-able**?
 - In an established repository?
 - Candidates for **re-use**?
 - In another Use Case scenario?

Use Case Requirements Template

[\(LINK to S&I UCR Template\)](#)

- Starting Point for S&I Initiative Use Cases
- S&I Use Case Requirements Template is:
 - A Word document, completed by each Initiative
 - A consistent pattern, evolving over past 3+ years
 - Consensus approved at end of UCR Phase (I)
 - Starting Point for S&I Harmonization Phase (II)
 - Starting Point for S&I Simplification Retrospective Use Case Analysis
 - Fully represented in Use Case Authoring Tool (UCAT)

Common Requirements Analysis

[\(LINK to S&I Simplification – Requirements Analysis Worksheet\)](#)

- Use Case Requirements (from UCR Template)
 - Assumptions
 - Pre-Conditions
 - Post-Conditions
 - System Functional Requirements
- Raw Requirements
 - Duplicate discovery
 - Fulfillment: Pre, During or Post Use Case Scenario
 - Traceability: to Fulfilling Use Case Scenario/Event/Action
 - Re-Use: Requirements, Actions
 - Restatement of Requirement

S&I Simplification

Common Actions

S&I Simplification WG has identified a set of 36 Common Actions used and re-usable across Use Cases. Actions fall into these categories:

- Identity: Patient, Practitioner, Organization
- Consistent Time
- Data Access Permissions
- Access Control
- Audit
- Query
- Encryption, Decryption
- Signatures: Individual, System
- Exchange: Transmit, Receive
- Registration, Admission, Discharge, Transfer
- Clinical Summary
- Clinical Entries
- Record Lifecycle: Originate, Retain, Amend, Verify, Attest, Access/View, Extract, Translate, Transmit/Receive, De-Identify...

Common Actions

- Next Two Slides – Show a condensed version of the S&I Simplification Common Actions (L→R by column)
 - A. Action Category
 - B. Action ID
 - C. Action Description
 - D. Requirements Related to or Fulfilled by Action
 - E. Data Requirements (partial)
 - F. EHR-S Function ref: ISO/HL7 10781 EHR-S FM
 - G. PHR-S Function ref: ISO/HL7 16527 PHR-S FM
 - H. Is Action Auditable?
 - I. Is Action typically Signed: by individual, system?

<p>The diagram illustrates the NIST Progression process. It starts with 'Standards' (implementation guide development, ensure use case requirements are satisfied, create testable assertions criteria), followed by 'Implementation' (implementation, application implements the standard). This leads to 'Test Cases' (specification of test cases, tests cases should test all requirements specified in the implementation guide). Then comes 'Test Data' (development of test messages, messages support test cases, valid and invalid). Next is 'Test Material' (artifacts to support testing, XML message profiles, vocabulary, validation context files). Following that is 'Test Scripts' (processable test cases, methods and tools to transform test cases into machines processable instructions). 'Test Execution' (execution of the test scripts, test engine interprets test scripts, validate message against test material) follows. Finally, 'Results' (juror document or test report, create inspection document, provide validation test report) and 'Analysis' (automated or human analysis, test or certification managers determine pass/fail based on results) conclude the process.</p>
