CQF Ischemic Vascular Disease - IVD - Use of Aspirin or Another Antithrombotic

Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic and Portable Clinical Decision Support

Motive's primary goal is to support the development of a national standard for sharable, executable CDS artifacts and quality measures. This community effort and experience is critical to achieving outcomes-driven health care and providing clinicians with the tools they need to deliver high-quality care.

In this pilot, Motive will demonstrate that a shareable ECA rule can be created, deployed, and executed in at least one third-party clinical system, such as an electronic health record (EHR), or by a cloud-based CDS service, using the CQF standard for artifact representation.
This pilot will support the implementation and testing of the CQF data model (QUICK) and query language (CQL) in a real-world scenario and provide feedback and specifications for the standards documentation and implementation guide.
The full pilot summary file is below. Please contact jscherer@motivemi.com with any questions.. The results of the phase III survey is also included
