

Notes from the June 19, 2020 call

Discussion focused on what use cases to consider:

- Current workload - based on following, we may take one new use case, and possibly a second.
 - finish publication of 360XL
 - Improve documentation
 - Insurance and prior authorization description - update IG and finish change proposals
 - Use of Argonaut FHIR scheduling - update IG
- Possible new use cases:
 - LTC facility outbound transfer - to acute, to another LTC facility, to home care
 - eConsult - a consult based on documentation only, no patient visit (in person or tele-)
 - Referrals related to Social Determinants of Health (SDH)
- Additional discussion:
 - Patient involvement - this needs to be better documented (add to current workload)
 - Payer interactions - this needs to be better documented
 - prior authorizations (already in workload)
 - in/out of network (add to current workload)
- Followup - create a survey of the following use case options and send to mailing list
 - LTC to Acute
 - LTC to LTC
 - eConsults
 - SDH referrals
