## LRI

The LRI IG recon activity has been segmented by Use Case (General LRI, Clinical Genomics, Newborn Dried Blood Spot Screening, Public Health) with the following merge criteria and spreadsheet usage rules:

- There is a master spreadsheet that will be updated and posted every Monday AM after merging completed items from the other Use Cases.
- As each Use Case focused sub-group completely resolves items assigned to their track, those items are to be marked in their spreadsheet by filling the comment number cell in column A with a Red fill color and a copy of the marked up spreadsheet sent to Bob Yencha and Hans Buitendijk.
  - NOTE:** ONLY the items marked in Red will be merged into the master. Once an item has been merged the Use Case sub-group must note which items have been re-opened and subsequently modified when submitting the updates to avoid loss of production notes related to applying the changes to the IG.
- The WG **must** remove the red fill from their working copy after sending to the editors and proceed to address any remaining items, marking the newly resolved items with a red fill. A copy of the spreadsheet showing only the most recent updates should be forwarded back to Bob Yencha and Hans Buitendijk.

As noted, the master will be updated and posted every Monday, the Use Case specific postings may have a different cycle.
