Usage

Webapp Usage

Web Front-end Usage

- An interactive web front-end is available at the root of the deployed webapp's context (e.g. http://localhost:10080). See the Overriding Properties section of the Configuration Guide for details on how to change the context of the deployed webapp so that it can be accessed at a path other than the root (e.g. http://localhost:10080/sdcct-web-gateway).
- All *modern* (if Internet Explorer, at least v11) browsers are supported (Firefox and Chrome being tested the most).
- The descriptions of the testcases available for testing an IHE Form Archiver, Form Filler, Form Manager, and Form Receiver are listed in the dropdowns available upon selection of an IHE SDC role to test. For more information regarding the testcases, see the Testcase Package.

Web Service Usage

- The IHE SDC web services can be accessed at the following endpoints:
    - http://localhost:10080/<context_path>/service/rfd/FormArchiver
    - http://localhost:10080/<context_path>/service/rfd/FormManager
    - http://localhost:10080/<context_path>/service/rfd/FormReceiver
- The WSDLs associated with the IHE SDC web services are available at the following URLs:
    - http://localhost:10080/<context_path>/service/rfd/FormArchiver?wsdl
    - http://localhost:10080/<context_path>/service/rfd/FormManager?wsdl
    - http://localhost:10080/<context_path>/service/rfd/FormReceiver?wsdl
